

Procedure for recovering unused space on the 2010/2011 Classmate hard drive

This document describes the steps for recovering the unused 5GB of hard drive space available on the 2010 and 2011 Classmate PC after imaging with the “2011 Image for ’10 Classmate” or “2011 Image for ’11 Classmate” restoration keys distributed at Kickoff.

NOTE: This procedure requires the modification of the files included on the restoration key. *FIRST* recommends making a backup of the restoration key prior to making these changes. This procedure also requires the Classmate to be reimaged. Be sure to also backup any critical data on the Classmate prior to reimaging.

Procedure:

1. Download and extract the files from the Control System section of the [2011 Kit of Parts Website](#). Place these files on your Desktop:
 - a. AUTOINSTALL.CMD
 - b. DISKPARTSCRIPT.TXT
 - c. HIDESYSTEM.TXT
2. Modify the following files included on the restoration key
 - a. Rename AUTOINSTALL.CMD to AUTOINSTALL.CMD.BAK
 - i. If AUTOINSTALL.CMD.BAK already exists, rename AUTOINSTALL.CMD to AUTOINSTALL.CMD.BAK2
 - b. Rename DISKPARTSCRIPT.TXT to DISKPARTSCRIPT.TXT.BAK
 - i. If DISKPARTSCRIPT.TXT.BAK already exists, rename DISKPARTSCRIPT.TXT to DISKPARTSCRIPT.TXT.BAK2
3. Copy the new files to the root directory of the restoration key. Example: If your restoration key shows up as drive D:, copy the updated files to D:\
4. Once these files have been copied to the restoration key. Use the key to reimage the Classmate PC following the steps outlined in the *How to Setup your 2011 Driver Station* document available on the [2011 Kit of Parts Website](#). Upon completion, there should be a 5GB increase in the available drive space.

Release Notes:

Rev.0 – Initial version

Rev.A – Update files to correct issue where bootmgr may not be accessible after applying image
